

Section A – Basics (Short Answers)

Q-1. What is SEO? Explain On-Page and Off-Page SEO.

[ANSWER]

SEO (Search Engine Optimization) is the process of improving a website's visibility on search engines like Google so that it ranks higher and gets more organic (free) traffic. It involves optimizing content, structure, and authority to make the website more useful and relevant for users and search engines.

On-Page SEO refers to all the optimizations done directly on your website, such as using the right keywords, writing high-quality content, optimizing titles, meta descriptions, headings, images, and improving page speed and user experience.

Off-Page SEO involves actions taken outside your website to improve its authority and ranking, like getting backlinks from other websites, social media promotion, guest posting, and building brand trust across the internet.

Q-2. Define keywords. What is the difference between short-tail & long-tail keywords?

[ANSWER]

Keywords are the words or phrases that people type into search engines like Google to find information. In SEO, keywords help your content match what users are searching for, improving your chances of ranking higher.

Short-tail keywords are broad and general search terms (e.g., “shoes” or “digital marketing”). They have high search volume but strong competition and are less specific.

Long-tail keywords are more detailed and specific phrases (e.g., “best running shoes for beginners” or “digital marketing course in Rajkot”). They have lower search volume but less competition and usually bring more targeted and high-converting traffic.

Q-3. What is Crawling, Indexing & Ranking?

[ANSWER]

Crawling, Indexing, and Ranking are the three main steps search engines like Google use to show results:

- **Crawling:** Search engines use bots (also called spiders) to discover new and updated web pages by scanning links across the internet.
- **Indexing:** After crawling, the search engine stores and organizes the content in its database (index) so it can be quickly found later.
- **Ranking:** When a user searches, the search engine shows the most relevant and high-quality pages at the top based on factors like keywords, content quality, and backlinks

Q-4. What is a SERP? Mention any 3 SERP features.

[ANSWER]

SERP (Search Engine Results Page) is the page displayed by search engines like Google after a user enters a query. It shows a list of relevant results based on the search.

3 common SERP features:

1. **Featured Snippet** – A highlighted answer shown at the top of results.
2. **People Also Ask (PAA)** – A list of related questions users commonly search.
3. **Local Pack** – A map with nearby business listings (useful for local searches).

Q-5. What is domain authority?

[ANSWER]

Domain Authority (DA) is a metric developed by Moz that predicts how well a website is likely to rank on search engines like Google. It is scored from 1 to 100—the higher the score, the stronger the website's ability to rank.

DA is based on factors like the number and quality of backlinks, overall website trust, and SEO performance. It's mainly used to compare websites, not as an official ranking factor by Google.
